

*David Haziza received his PhD in 2005 from Carleton University. In 2006, he joined the department of mathematics and statistics at Université de Montréal as an assistant professor and was promoted to full professor in 2017. David Haziza's work deals with sampling and estimation in finite population sampling, including the problem of inference in the presence of missing data, robust estimation procedures in the presence of influential units, resampling methods and machine learning methods. He is a consultant for Statistics Canada, where he spends one day per week. He received the 2019 CRM-SSC Prize, the 2018 Gertrude Cox award and teaching awards at Université de Montréal.*
